Recent Projects

Wirez

An easy to use designing app half way between a wireframing and a prototyping tool. Quick to prototype basic design and flow of an app. Better than wireframes, faster and easier than complex prototyping tools. Built in HTML, CSS, JavaScript, with a touch of jQuery UI, and Parse as the database.

HeyU

HeyU is a chat app that aims to thin the gulf between meeting online and meeting in person, allowing people to meet in real life while they are already out and about, just minutes after connecting on the app. Users are randomly connected to other live users within a short distance in a non-persistent chat and given 10 minutes to chat and agree to meet up or not. It's like speed dating but online and for meeting new people. Built in Angular, Ionic, Node and Express, MongoDB, and Socket.io.

WORK EXPERIENCE

JavaScript Developer

Activ Health

Contributed to building two hybrid-mobile apps for the fitness trainer industry. Worked on the server-side API built in Sails.js. Front-end work was done in Ionic and Angular.

Teaching Assistant

Coding House

I worked as a Teaching Assistant at Coding House Institute from Jan. 2015 to March 2015. In this role I helped students six days a week during daily 9 hour workshops as they were learning Full Stack JavaScript Development. I also ran weekly meetings with students on their progress and participated in daily staff meetings.

EDUCATION

CODING HOUSE INSTITUTE
Fremont, CA   2014
Web Development

WENTWORTH INSTITUTE OF TECHNOLOGY
Boston, MA   2011 - 2013
